About SDDI
Solar Dynamics Doppler Imager(SDDI) was installed on SMART in the end of 2016-Apr to observe the motion of filaments eruptions.
In contrast to the previous observing system, which was able to observe the velocity of filament eruptions up to 60km/sec, the new system can capture the velocity up to 400km/sec.

The wavelength designated on the data is not exact because of the slight variation of the central wavelength of the Lyot filter due to the temperature excursion.

Download site of SMART solar image data: <http://www.hida.kyoto-u.ac.jp/SMART/>

The screenshot shows a web browser window with the URL www.hida.kyoto-u.ac.jp/SMART/T1_before2015.html in the address bar. The page title is "SMART T1 Data Archive". Below the title, there is a note: "(click daily image to jump daily archive)". The main content is a vertical list of years from 2007 to 2016, each followed by a horizontal list of months with their corresponding URLs. A red annotation on the right side of the page reads: "← If you want to download the data on 2011/09/08, please click “2011-Sep”."

Hida observatory SMART T1 Cloud model application method

K. Otsuji

Hida Observatory, Kyoto University

2017/05/22

About this manual

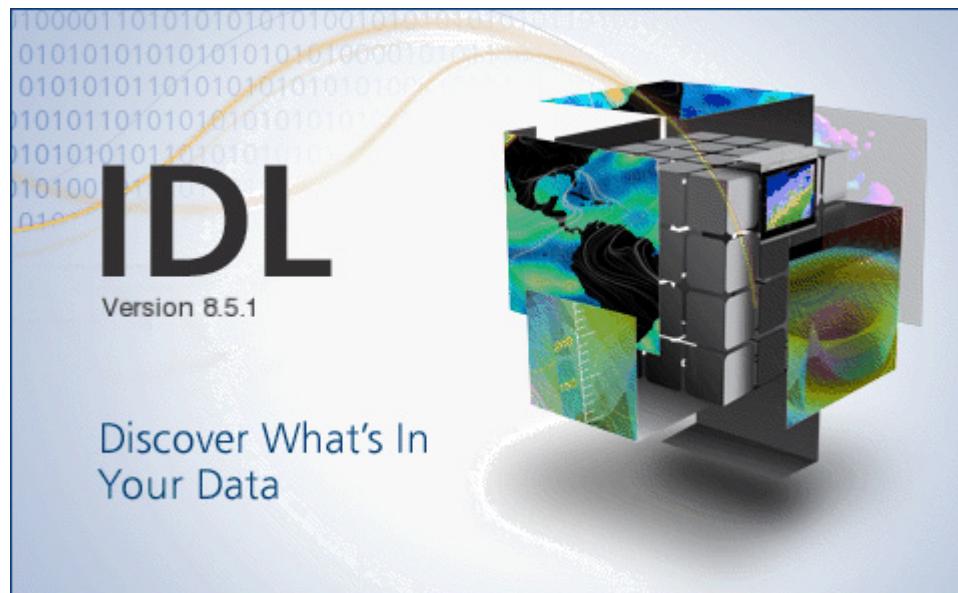

- To apply Beckers' cloud model (Beckers 1964) to H alpha multi-wavelengths observation by SMART in Hida observatory.
- Using IDL code, fitting the contrast profile of “cloud” on the observed data, derivation of cloud parameters (Source function, Optical depth, Doppler width and Doppler shift).
- The local correlation tracking (LCT) method is applied to derive transversal motion on the image plane.

IDL programs

- prep.pro
 - Specify data directory
 - Create calibration files (dark and flat frames)
 - Select dataset and output the list of files
- cont.pro
 - Define the field of view of clipped data
 - Calibration and contrast calculation
 - Output clipped fits files and gif images
- param.pro
 - Apply cloud model to the contrast datasets
 - Output parameters fits files and gif images
- trans.pro
 - Calculate the 2nd level Hydrogen column density and derive the transversal velocity field using local correlation tracing
 - Output the parameters fits files and gif images

Startup

- Click the “SSWIDL” icon on the desktop and start the IDL with Solar SoftWare (SSW)

prep.pro (1)

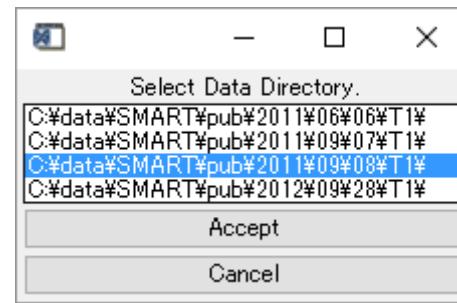

The screenshot shows the IDL software interface with the following details:

- Title Bar:** IDL - T1_cloudmodel/prep.pro - IDL
- Menu Bar:** ファイル(F) 儲集(E) ソース(S) プロジェクト(P) マクロ 実行(R) ウィンドウ(W) ヘルプ(H)
- Toolbar:** 新規ファイル 新規プロジェクト 開く 保存 切り取り コピー 貼り付け 元に戻す やり直し 戻る 戻す コンバイル 実行 停止 イン オーバー アウト コールスタック リセット
- Project Explorer:** 显示了多个IDL文件，包括 build_bridges.pro, burn_bridges.pro, cont.pro, ct_doppler.pro, findlimb.pro, flct.exe, get_idle_bridge.pro, hybrid_sub.pro, hybrid.pro, lm052, lm056, param.pro, prep.pro, qr.pro, qrsolev.pro, t1_cloudmodel_callback.pro, t1_cloudmodel_offlimb.pro, t1_cloudmodel_ondisk.pro, t1_cloudmodel_sub.pro, t1_dark_flat.pro, t1_imageparam.pro, t1_limbdark.pro, t1_ref_ha.prof.dat, t1_ref_ha.prof.pro, t1_scatter.pro, testind.dat。
- Editor:** 编辑器显示了名为 fitslist_mod_event.ev 的程序代码。该代码处理鼠标事件，特别是当鼠标在图像上移动时。它读取并处理名为 fitslist.csv 的文件，将数据写入名为 fitslist2 的临时文件中。代码还包含对路径的处理逻辑，确保文件夹结构正确。
- Output Window:** 显示了命令行输出，包括环境变量设置（如 \$SSW_PATH）和路径相关的命令执行结果。
- System Task Bar:** 显示了Windows任务栏图标，右侧显示了系统日期（2017年5月19日）和时间（11:43）。

Open prep.pro and “コンパイル(compile)” -> “実行(execute)”

prep.pro (2)

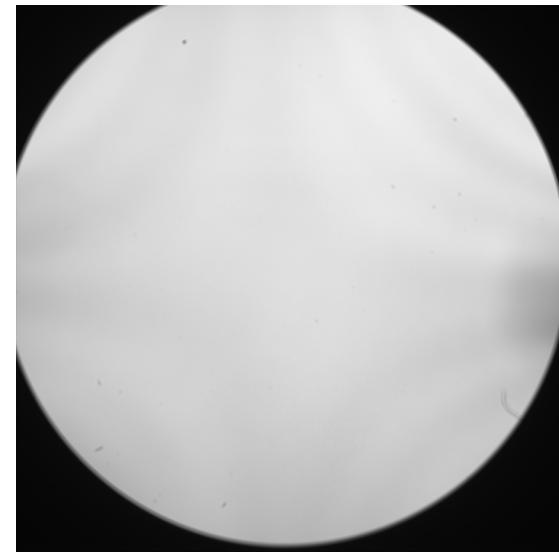

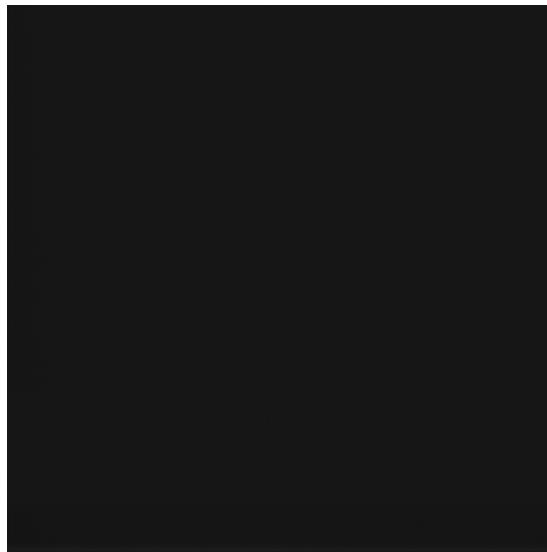

- Data directory selecting dialog open
- Select the directory for process
- In this demonstration, please select “C:¥data¥SMART¥pub¥2011¥09¥08¥T1¥”
- Click “Accept”

directory selecting dialog

prep.pro (3)

- Calibration files are output in the
IDLWorkspace¥T1_clouddmodel¥20110908¥cal
ib

Dark and flat frame images

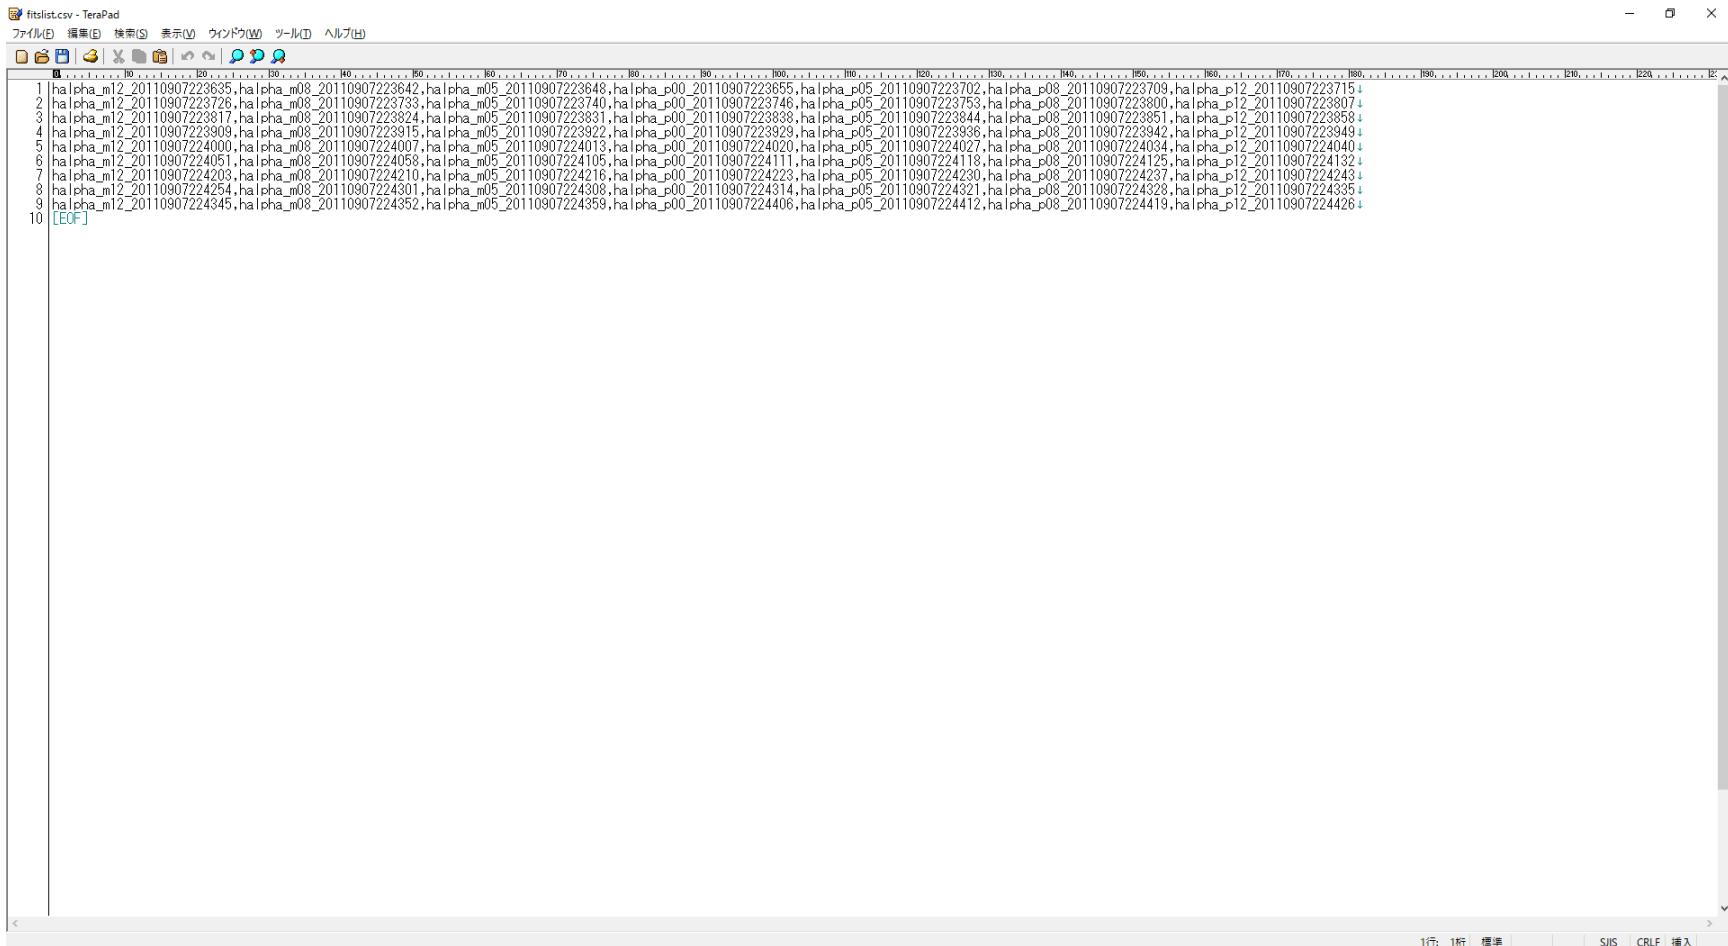

prep.pro (4)

- File selection dialog open
- Click the file name and toggle include/exclude from the file list
- In this demonstration, all files are included
- Click “Done”

Output IDLWorkspace¥T1_clouddmodel¥20110908¥fitslist.csv

(21)

prep.pro (6)

Output IDLWorkspace¥T1_cloudmodel¥20110908¥obstime.gif

(22)

cont.pro (1)

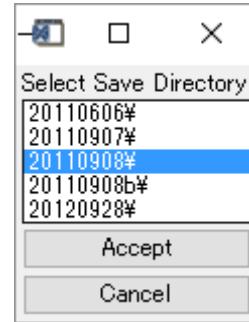

The screenshot shows the IDL development environment with the title bar "IDL - TI_cloudmodel/cont.pro - IDL". The menu bar includes "ファイル(F)", "編集(E)", "ソース(S)", "プロジェクト(P)", "マクロ", "実行(R)", "ウィンドウ(W)", and "ヘルプ(H)". The toolbar contains icons for file operations like "新規ファイル", "新規プロジェクト", "保存", "コンパイル", "実行", "停止", "イン", "スパー", "アバート", and "リセット". The main window has tabs for "prep.pro" and "cont.pro". The "cont.pro" tab displays a script with several lines of IDL code. The code includes file operations like "file_search", "readfits", and "read_csv", as well as various parameters and loops. Below the script is a "コマンド履歴" (Command History) pane showing a list of compiled modules and functions. The bottom status bar indicates "書き込み可能" (Writeable), "スマート挿入" (Smart Insert), and "1:1". The system tray at the bottom shows icons for network drives, battery, and system status.

Open cont.pro and “コンパイル(compile)” -> “実行(execute)”

(23)

cont.pro (2)

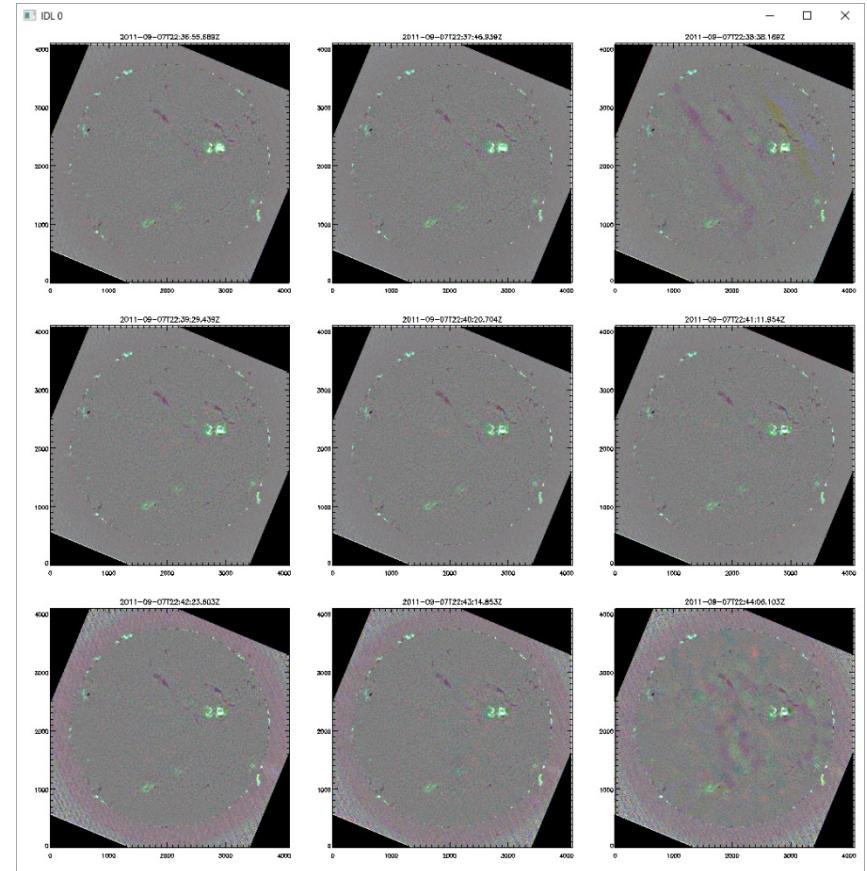

- Save directory selecting dialog open
- Select the directory for process
- In this demonstration, please select “20110908¥”
- Click “Accept”

directory selecting dialog

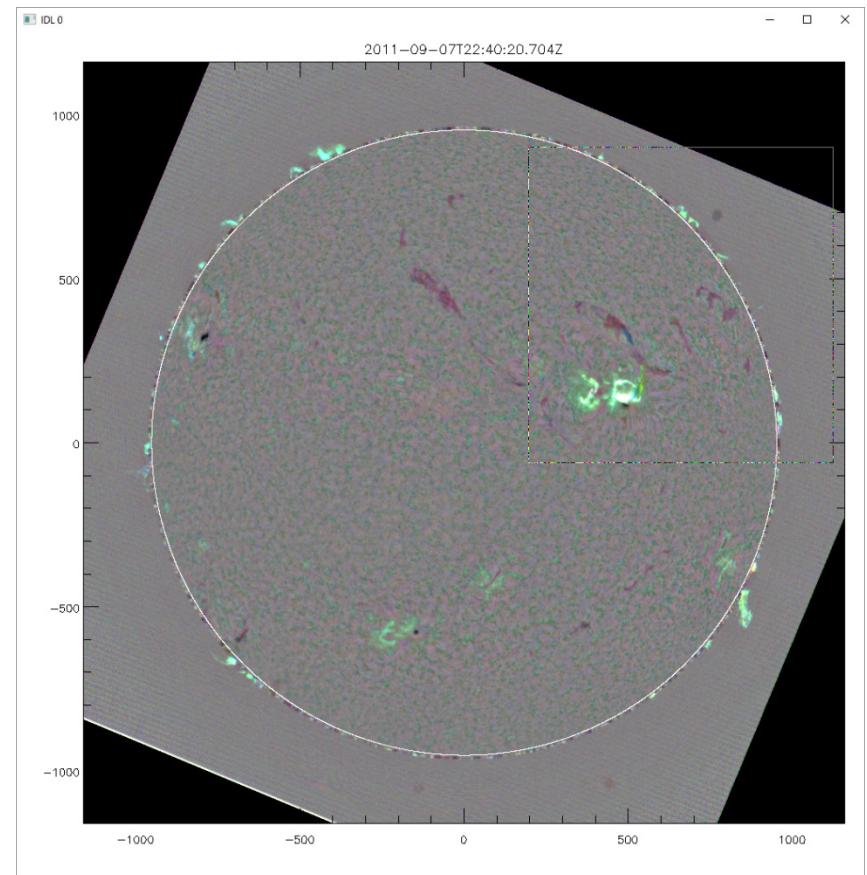

cont.pro (3)

- 9 Contrast images are calculated
- window open
- Click the image to set the FOV of clipped data

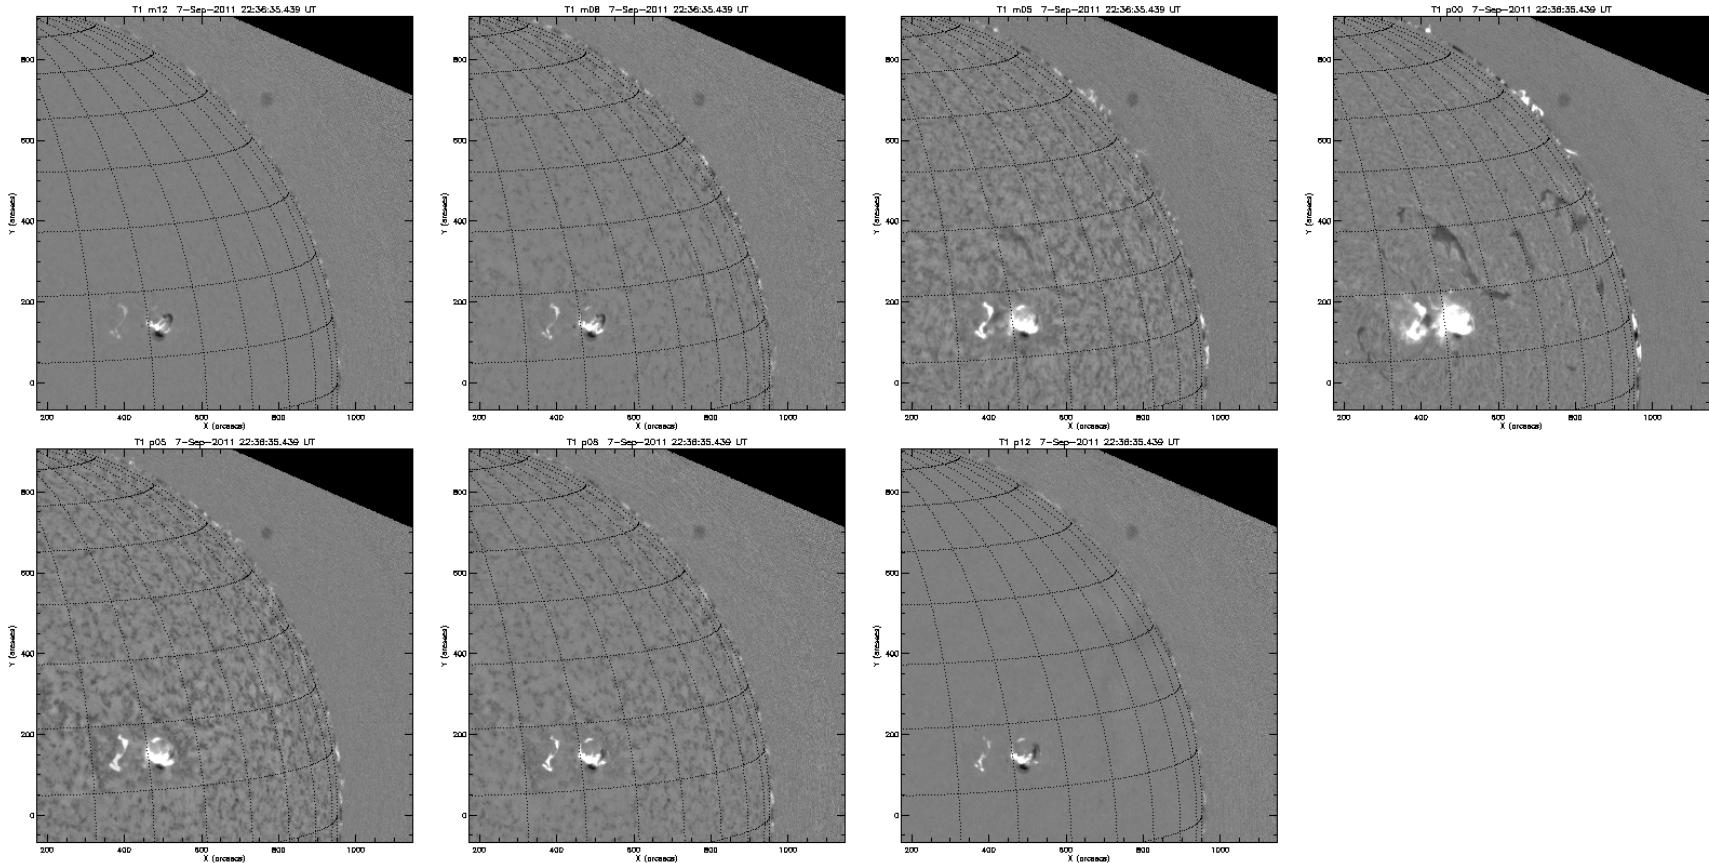

cont.pro (4)

- displaying the selected full FOV image
- Using mouse to move/enlarge/shrink the FOV of clipping area.
 - left click + drag: move
 - middle click + drag: enlarge/shrink
 - right click: done

cont.pro (5)

Output contrast image gifs in IDLWorkspace¥T1_cloudmodel¥20110908¥gif¥cont¥
Fits files are output as 20110908¥fits¥cont_* .fits

(27)

param.pro (1)

The screenshot shows the IDL T1_cloudmodel/param.pro - IDL window. The menu bar includes ファイル(F)、編集(E)、ソース(S)、プロジェクト(P)、マクロ、実行(R)、ウィンドウ(W)、ヘルプ(H). The toolbar includes 新規ファイル、新規プロジェクト、開く、保存、切り取り、コピー、貼り付け、元に戻す、やり直し、コンパイル、実行、停止、イン、オーバー、アウト、SMAINS\$、リセット. The left pane shows the project structure under T1_cloudmodel, including files like 20110606, 20110907, 20110908, 20110908b, 20120928, old, banner, bridges.pro, build_bridges.pro, burn_bridges.pro, cont.pro, ct_doppler.pro, findlimb.pro, flct.exe, get_idle_bridge.pro, hybrid_sub.pro, hybrid.pro, lm052, lm056, param.pro, prep.pro, qr.pro, qrslve.pro, t1_cloudmodel_callback.pro, t1_cloudmodel_offlimb.pro, and t1_cloudmodel_ondisk.pro. The main pane displays the param.pro script:

```
CD, 'C:\Users\Hidaten\IDL\Workspace\T1_cloudmodel'

Fits files are output as 20110908\\$fits\\$trans_*.fits

(34)

Summary

- Using this IDL codes, one can easily derive the physical parameters such as the 3 dimensional velocity field and the density of filaments.
